

Employee Policies & Service Standards Packet

Owner, manager, and employee operating policies for branch operations, QR shipment intake, OPL reporting, service quality, security, and daily KPI compliance.

Prepared for	Mo / CubicShip ownership
Effective status	Draft for internal review and approval
Version	June 2026 operating draft
Scope	CubicShip service point staff, managers, owner/admin, and approved branch users

Important approval note

This packet is an internal operating policy draft, not legal advice. Before CubicShip uses it as a formal employee, contractor, or location policy, Mo should align it with signed agreements, DHL/CRA requirements, payroll rules, local labor law, and counsel review.

Core policy summary

- **Business-first service:** CubicShip should feel like a professional shipping and business services platform, not a loose counter workflow.
- **Customers stay separate:** Customers use QR intake and Customer Profile. They do not access the owner, manager, or employee portal.
- **CRA/manual labels for now:** Staff create and finalize labels outside CubicShip in CRA or the approved carrier system, then upload or attach label/order PDFs when needed.
- **Every branch has its own OPL:** Location accounts such as oaklawn@cubicship.com and dearborn@cubicship.com should see their own operational log, tasks, reports, and history.
- **Audit everything important:** Status changes, refunds, OPL edits, notes, label uploads, and staff activity should show who changed what and when.

Roles and access boundaries

Role	Primary user	Can access	Cannot access
Owner/ Admin	Mo	All locations, staff access, shipment status overrides, OPL, refunds ledger, reports, audit history, and policy downloads.	Nothing operationally blocked except production security rules after hardening.
Manager	Approved manager	Assigned location operations, daily reports, OPL, refunds review, order queues, training review, and employee activity.	Owner-only staff creation/removal and all-company security settings.
Employee	Branch staff	Assigned location queue, shift clock, daily KPI checklist, OPL entries, customer updates, label/order PDF upload, and service tasks.	Owner reporting, manager scorecards, staff controls, and other branch data unless granted.
Customer	Business customer	Customer Profile, QR shipment intake, order status, uploaded label/order PDFs, and their own history.	Owner portal, manager portal, employee portal, OPL, refunds ledger, and internal notes.

Conduct and integrity

- Act honestly in every transaction.
- Do not mislead customers with pricing, timing, shipment status, or service capability.
- Do not accept or offer unauthorized discounts, kickbacks, side arrangements, or unapproved refunds.
- Follow CubicShip SOPs, DHL/CRA requirements, carrier rules, and location-specific operating standards.
- Avoid conduct that damages CubicShip, DHL/carrier relationships, customers, or community trust.

Customer data, privacy, and documents

- Do not share customer names, addresses, tracking numbers, documents, payment information, screenshots, or package photos with unauthorized parties.
- Do not photograph packages, customer documents, system screens, or internal reports unless a manager or owner approved it for a legitimate business reason.
- Keep uploaded label PDFs, order PDFs, and customer documents inside approved portal/storage workflows.
- Report suspected data breaches, unauthorized access, lost documents, or accidental disclosure immediately.

Shipment and QR intake workflow

1. Customer scans the CubicShip QR code and fills out sender, receiver, shipment, package, and note fields.
2. The system creates a secured order number and routes the request to the correct location queue.
3. Staff verifies the customer information before using it. Do not blindly copy from the form if anything looks wrong.
4. Staff creates/finalizes the label in CRA or the approved external carrier system.
5. Staff records tracking/status/payment details in CubicShip and uploads the label/order PDF when available.
6. Customer can log in to see status, notes, and available downloads in Customer Profile.
7. Manager or owner can update status, correct amounts, delete bad records when allowed, and audit the history.

OPL, refunds, and daily reporting

- **Location OPL:** Each branch maintains its own operational log. Allentown, Oak Lawn, Dearborn, and other locations should not be mixed unless owner reporting intentionally aggregates them.
- **OPL fields:** Entries should capture date, employee, customer/reference, tracking number, service/category, destination, document/package type, amount, payment method/status, email sent, resolved status, comments, and follow-up notes.
- **Excel export:** Owner/manager must be able to download location-specific OPL workbooks with as much useful shipment detail as possible, not just totals.
- **Refund ledger:** Refunds are manual ledger records for now. Managers/owners should record amount, location, reason, customer/reference, status, and who approved or changed it.
- **Edits after submit:** Owner/admin should be able to add notes, fix amounts/totals, change status, or delete invalid shipment/OPL records with audit history.

Daily KPI review standard

KPIs should measure controllable work first. Revenue, traffic, and review volume must be adjusted by location foot traffic, operating hours, seasonality, and whether the employee had a real opportunity to serve customers.

KPI	Target / review standard	Purpose
OPL completion	100% of operating days submitted accurately.	Operational visibility
Daily store summary	100% submitted when assigned before leaving.	Performance visibility
Shipment accuracy	Errors tracked weekly; repeat errors reduced.	Service quality
Complaint resolution	Same-day response where possible; unresolved matters escalated.	Customer retention
Response time	Within agreed operating cadence for customer and Teams messages.	Communication discipline
Training completion	100% of required modules before independent work.	Consistency and readiness
Review asks	Ask when a real customer interaction creates a fair opportunity.	Reputation growth

Clock-in, location checks, and slow-day scoring

- Employees clock in at the start of the shift and clock out after completing end-of-shift KPI/checklist items.
- If location verification is enabled, the portal should ask for location at clock-in/out to reduce early punch-ins, late punch-outs, and off-site submissions.
- Low-traffic days should not automatically punish employees. Managers should review whether the employee stayed productive, followed standards, helped available customers, cleaned, trained, organized packages, and completed follow-ups.
- Review asks should be counted only when there was a fair customer opportunity. The goal is disciplined service behavior, not fake numbers.

Customer communication and issue handling

- Acknowledge customer concerns without becoming defensive.
- Clarify facts and review CubicShip, OPL, CRA, DHL/carrier, and tracking information before answering.
- Provide clear, honest updates. Never guarantee delivery timelines that the carrier does not guarantee.
- Take appropriate branch-level action, then escalate unresolved or serious issues.
- Document the issue, action taken, and next follow-up in OPL or the customer/order record.

Training and onboarding approach

- **Step 1:** Operating agreement is signed or acknowledged before training starts.
- **Step 2:** First week is hybrid: virtual onboarding first, then location practice and shadowing.
- **Step 3:** Training modules cover brand/service mindset, daily operations SOP, CRA/DHL processing, OPL/DSS reporting, customer issues, privacy/security, and revenue awareness.
- **Step 4:** Managers review the first-week checklist, shadowing notes, scorecard, gaps, and readiness before independent work.

Service quality review ladder

- **Coaching / clarification:** Minor or first-time service gap. Clarify standard, provide resources, and document discussion.
- **Service quality notice:** Repeated or material gap. Written concern with required corrective actions and timeline.
- **Performance improvement period:** Ongoing service risk. Defined review period and evidence of improvement required.
- **Contract review:** Serious or unresolved issue. Review service agreement remedies, including possible termination.
- **Immediate action:** Severe misconduct, security risk, fraud, harassment, customer data breach, or compliance risk.

Operational checklists

Checklist	Required standard
Opening	Store ready before opening time; alarm off and doors unlocked; lights/signage/systems on; supplies stocked; counters and floors clean; messages and Teams checked.
During-day	Greet every customer; process accurately; log activity in OPL; secure packages; keep workspace clean; check communications; document issues.
Closing	Secure packages and restricted areas; restock supplies; clean counters, workstations, and floors; submit OPL/DSS; power down equipment as required; set alarm and lock doors.
Shipment	Verify sender information; verify recipient information; confirm service type and cost; process in DHL CRA or the approved carrier system; print label/receipt; log tracking number in OPL; store securely.
Escalation	Record customer name, tracking/order number, issue description, system status, actions already taken, support needed, and urgency level.
Appearance	Confirm: Are you dressed properly for day-to-day operations? Clean, modest, professional, business-casual, safe for the branch, and customer-ready.

Acknowledgment

By signing below, the team member confirms they received this packet, understands the role-based portal boundaries, and agrees to follow CubicShip's service, security, OPL, customer communication, and daily checklist standards.
